

DPD-0135-59

27 January 1959

MEMORANDUM FOR: Director of Development & Procurement, <sup>(K)</sup>  
DPD-DD/P

SUBJECT : Elimination of Noise Interference with Elint Systems RTH

REFERENCE : Memo for DD/P from Communications Officer,  
DPD-DD/P, dated 21 January 1959, Same  
Subject (DPD-0549-59)

I have not signed off on the attached memorandum because I believe we must try to evolve a somewhat more limited program which can be kept within a more modest total than \$47,000. You will remember that in Kelly Johnson's office last week this matter came up, and I suggested that we carry forward a program to eliminate noise for System VII and hoped that this would take care of the noise problem for System IV as well. I still think this is the way we should proceed but would like to have someone look into the matter of how to pursue our objectives with respect to System VII and obtain the maximum by-product for the benefit of the other systems. I would also like to set a rather firm ceiling on this activity no higher than \$30,000. Would you see if a program can be designed which is (a) aimed at System VII, (b) promises as much benefit as possible to other systems with little added cost, and (c) fits within the indicated ceiling.
